DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an IC for control of an electronic ballast having, inter alia, a first increased current reference established during an ignition phase of the electronic ballast to permit ignition at a higher current level than that determined by a current reference; and a second increased reference for stabling a threshold below which the current measurement falls after ignition (claim 1); an electronic ballast for a fluorescent lamp having, inter alia, a reference signal adjustment circuit to modify the reference signal value to thereby modify the threshold for the electronic ballast current output determined by the current sense signal; and the reference signal being modified during ignition to obtain a higher threshold value and a corresponding higher electronic ballast current output value so that ignition occurs at a higher power level (claim 4); a method for flash suppressing during ignition of a lamp with an electronic ballast having, inter alia, the steps of increasing the current level output of the electronic ballast to a value above the threshold level related to ignition of the lamp, reducing the threshold level to a value less than the power output level of the electronic ballast after ignition of the lamp has occurred and igniting the lamp and reducing the power output level of the electronic ballast below the reduced threshold (claim 7). The remaining claims 2, 3, 5, 6, 8 and 9 are allowed by virtue of the dependencies on the independent claims. Hence, the examiner has allowed claims 1 through 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Veldman et al., Patent No. 5,680,017 ; Wilhelm et al., Patent No. 6,211,623.

None of the above patents discloses the control of the electronic ballast during and after ignition as recited .
